

The TECH400SDE is designed to work in the harsh environment of the tyre workshop. It takes its functionality from our experience in equipping car plants worldwide. The improved workflow is now even more adapted to the requirements of a tyre workshop mechanic. The tool menu is structured in the three main steps:

- Vehicle Check** for finding fault – Test Before You Touch.
- Program Sensor** to copy sensors or create new ones by using universal sensors.
- Relearn** - easily learn new sensor IDs to the vehicle's ECU.

The tool guides you through every process step by step. The TECH400SDE meets the requirements of the EU TPMS legislation effective from 2012.

# TECH400SDE

## Benefits:

- TPMS activation, scan and programming tool in one
- Easy-to-use, large display and intuitive software
- Free software updates first year
- Robust design with rugged OBD plug and cable for workshop duty
- Integrated re-learn procedures simplifies and speeds process
- Decodes critical output of sensors (pressure, temperature, battery)
- Selection by MMY ensures correct sensor is activated and read
- Displays correct TPMS parts with part numbers (Sensor Information, Replacement Sensors, Service Kits, Relearn Methods, Torque Values, OBD Comms Location and Service Tips)
- Simple software update via internet or SD card
- Bartec TPMS audit mode saves all records in the chosen language
- TPMS error codes (DTCs) read and interpreted
- Dust, water, oil and grease resistant keypad
- High capacity long life internal battery, charges also from USB

## The Tech400SDE Kit includes:

### The rugged professional tool for TPMS

- Tech400SDE Tool
- User Manual Booklet
- OBD II cable
- Power charger
- USB Cable
